

In the short time I have known David Williams he has opened my eyes to numerous environmental concerns and the need for everyone to conserve and protect our planet. His resolve in this pursuit is as strong as I have ever witnessed.

David and I recently taught second graders to write and performed a "Conservation" musical at the STEM Magnet Lab School in Northglenn, Colorado. Before David arrived the STEM school the classroom teachers did not even have a curriculum for conservation. In addition to providing invaluable resources on the environment, ecology, conservation and an overall awareness of our responsibility to the earth, David's talent as a writer, musician, graphic artist, teacher and performer brought out the best in all involved and stimulated overwhelming growth in our students.

John Denver's Windstar Foundation has recently learned of the above project and has actively promoted it. "Colorado & Company" (9 News affiliate) has offered to feature the Conservation Musical on their television program.

Undoubtedly you know of David's Emmy award winning work for PBS. In my opinion this is only a fraction of what David Williams can teach us.

An amazing scholar, advocate for the environment and warm hearted individual... David Williams is a man who is changing the way we think and care for the planet.

Please feel free to contact me so that I may brag about this great man.

Sincerely,

Dr. Gregg Cannady
